# RE17RMXMU

multifunction relay, Harmony Timer Relays, 8A, 1CO, 0.1s..10h, pulse delay, 24V DC or 24...240V AC DC

#### Main

Range of Product	Harmony Timer Relays
Product or Component Type	Multifunction relay
Discrete output type	Relay
Width	0.69 in (17.5 mm)
Device short name	RE17R
Time delay type	Pulse delay Safe-guard Bistable Interval
Time delay range	660 s 110 min 0.11 s 110 h 110 s 660 min 10100 h
Nominal output current	8 A

#### Function Ad: Pulse Delayed Relay with Control Signal

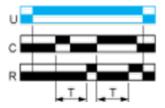

#### Description

After power-up, pulsing or maintaining of control contact C starts the timing T.

At the end of this timing period T, the output R closes.

The output R will be reset the next time control contact C is pulsed or maintained.

#### Function: 1 Output

#### Function Ah: Pulse Delayed Relay (Single Cycle) with Control Signal

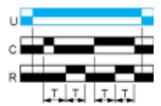

#### Description

After power-up, pulsing or maintaining of control contact C starts the timing T. A single cycle then starts with 2 timing periods T of equal duration (start with output in rest position).

Output R closes at the end of the first timing period T and reverts to its initial position at the end of the second timing period T.

Control contact C must be reset in order to re-start the single flashing cycle.

#### Function: 1 Output

#### Function N: Retriggerable Interval Relay with Control Signal On

#### Description

After power-up and an initial control pulse C, the output R closes.

If the interval between two control pulses C is greater than the set timing period T, timing elapses normally and the output R closes at the end of the timing period. If the interval is not greater than the set timing period, the output R remains closed until this condition is met.

### Function: 1 Output

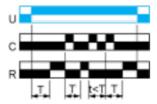

#### Function O: Retriggerable Interval Delayed Relay with Control Signal On

#### Description

An initial timing period T begins on energisation. At the end of this timing period, the output R closes.

As soon as there is a control pulse C, the output R reverts to its initial state until the interval between two control pulses is less than the value of the set timing period T. Otherwise, the output R closes at the end of the timing period T.

## Function: 1 Output

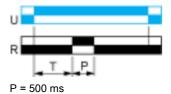

Function P: Pulse Delayed Relay with Fixed Pulse Length

#### Description

The timing period T begins on energisation.

At the end of this period, the output R closes for a fixed time P.

#### Function: 1 Output

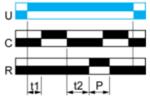

Function Pt: Pulse Delayed Relay (Summation and Fixed Pulse Length) with Control Signal Off

#### Description

On energisation, timing period T starts (it can be interrupted by operating the Gate control contact G).

At the end of this period, the output R closes for a fixed time P.

#### Function: 1 Output

T = t1 + t2 + ...

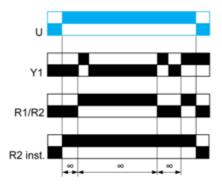

P = 500 ms

#### Function TL: Bistable Relay with Control Signal On

## Description

After power-up, pulsing or maintaining of control contact Y1 switches the output on.

A second pulse on the control contact Y1 switches the output relay off.

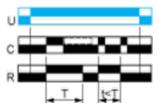

Function Tt: Retriggerable Bistable Relay with Control Signal On

#### Description

After power-up, pulsing or maintaining of control contact C switches output R on and starts timing T.

The output switches off at the end of the timing period T or following a second pulse on the control contact C.

#### Function: 1 Output

#### Function W: Interval Relay with Control Signal Off

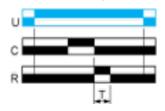

#### Description

After power-up and opening of the control contact, the output(s) close(s) for a timing period T.

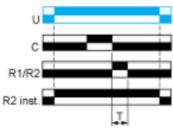

At the end of this timing period the output(s) revert(s) to its/their initial state.

The second output can be either timed or instantaneous.

## Function: 1 Output

#### Function: 2 Outputs

2 timed outputs (R1/R2) or 1 timed output (R1) and 1 instantaneous output (R2 inst.).
