Suggested specifications for service entrance fittings

01 Series 4175 pipe strap (EMT)

_

02 Series 1275/1275AL pipe strap (rigid metal conduit and IMC)

03 Series 1350/1350AL

pipe spacer (rigid metal conduit IMC and EMT) —

04 Series 3870 bonding and grounding bushing – insulated

05 Series 106 bonding locknut

- All service fittings shall be approved for the purpose by a nationally recognized testing laboratory, inspection agency or product evaluation organization.
- Where service raceway consists of a rigid metal conduit, intermediate metal conduit, electrical metallic tubing or where service entrance cable is used as service conductors, a suitable raintight service head conforming to Federal Standard W-C-586 shall be provided.
- Service raceway shall be securely fastened in place to the supporting surface at intervals as specified by the code using suitable straps and spacers; straps and spacers shall be of malleable iron or steel construction, hot-dipped galvanized or electro zinc plated conforming to Canadian Standards Association Standard C22.2 No. 18.4 and as manufactured by ABB: series 1275 or 4175 straps and series 1350 spacers; aluminum straps or spacers such as series 1275AL and series 1350AL may be substituted when installed in environmental conditions that are more than normally corrosive.
- For grounding and bonding of service raceway, end of raceway or the terminating fitting shall be equipped with bonding locknuts and insulated metallic grounding and bonding bushing as required.
- Bonding locknuts shall be of hardened steel or malleable iron construction, electro zinc plated, and provided with hardened bonding screws as manufactured by ABB, series 106 bonding locknuts.
- Insulated metallic grounding and bonding bushing shall be of malleable iron/steel construction, electro zinc plated and assembled with an insulator listed or certified for 150 °C/ 302 °F service as manufactured by ABB, series 3870.

Suggested specifications for service entrance fittings

- 01 Series 2111 service entrance cable fitting
- 02 Series 2116-TB underground feeder cable fitting
- 03 Series 3302M two-screw fitting (insulated)
- 04 Series 5262, 5302 sealing gasket
- 05 Series 1341 cable strap
- · Where service entrance cable is used as overhead service conductors and code requires use of a service head, entrance caps shall be installed; caps shall be cast metal type of suitable ferrous or nonferrous metal equipped with thermoset insulators and proper knockout openings; when installed with proper drip loop, caps must assure raintight conditions.
- Terminating fittings for service entrance cable (Type SE or USE) or underground feeder and branch - circuit cable (Type UF) in locations where exposed to intermittent or constant moisture or in dry locations and subjected to mechanical strain shall be of watertight strainrelief type as manufactured by ABB, series 2111 or 2116-TB; fittings shall be constructed of ferrous or nonferrous metal and equipped with taperthreaded hub, beveled moisture-resistant/oilresistant synthetic rubber bushing. In dry locations, nylon-insulated two-screw type fittings of malleable iron/steel construction, electro zinc plated inside and outside including threads, such as series 3302M manufactured by ABB may be substituted.
- · Where service entrance cable is terminated into a threadless opening using hub-type fittings, a gasket shall be provided between the outside of box or enclosure and fitting shoulder; gasket shall be of moisture-resistant/oil-resistant synthetic rubber type adequately protected by and permanently retained to a metallic retainer as manufactured by ABB, series 5262 or 5302.
- · Service entrance cable shall be adequately supported at intervals enumerated in code using cable straps conforming to requirements of CSA Standard C22.2 No.18.4; cable straps shall be of malleable iron/steel construction, hot-dipped galvanized or electro zinc plated as manufactured by ABB, series 1341.
- At the point where the service cable enters the building, a suitable sill plate shall be provided; sill/wall plate shall be sealed to assure raintight conditions.

Specifications

01 Type SE/Type USE 2111 series

Application

 To connect service entrance cables to a meter box or an enclosure

Features

- Neoprene bushing, resists oil and water; grips cable the full length of the bushing, providing adequate strain relief without damaging outer jacket (A)
- Taper-threaded body (B)
- Stainless steel retaining ring protects cable jacket against abrasion; reduces installing torque effort (C)
- Rugged ribbed steel gland construction (D)
- Suitable for Type USE I75, USE I90 and USE B90 (CEC Table 19) service entrance cable

Standard material/finish

- Body: Zinc die cast/as cast
- Gland: Steel/electro zinc plated and chromate coated
- · Retaining ring: Stainless steel/passivated
- · Bushing: Neoprene/as molded

Range

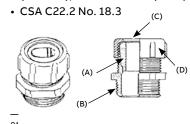

- Oval (flat) cable size 0.260 x 0.500 through 1.062 x 1.765
- Type USE cable size (3) #12 through (3) 4/0 AWG conductors
- Hub size ½ in. through 2 in. NPT (taper pipe threads)

Listing/certification

 CEC Rule 6-300 (1) add (b) use underground service entrance with mechanical protection as per CEC Rule 12-012

Conformity

 UL514B, NEMA FB-1, Federal Standard H-28 (threads), NFPA70-2009 (ANSI)

Underground feeder cable fittings

— 02 2116-TB Series

Application

 To connect underground feeder cables to a box or an enclosure

Features

- Neoprene bushing resists oil and water; grips cable the full length of the bushing, providing adequate strain relief without damaging outer jacket (A)
- Taper-threaded body (B)
- Stainless steel retaining ring protects cable jacket against abrasion; reduces installing torque effort (C)
- Rugged ribbed steel gland construction (D)

Standard material/finish

- Body: Zinc die cast/as cast
- Gland: Steel/electro zinc plated and chromate coated
- Retaining ring: Stainless steel/passivated
- · Bushing: Neoprene/as molded

Range

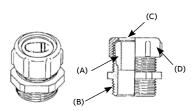

- Oval (flat) cable size 0.235 x 0.500 through 0.260 x 0.740
- Hub size ½ in. through 1 in. NPT (tapered pipe threads)

Listing/certification

 CEC Rule 30-1004 (d) Wiring method, underground, where deviation has been allowed for permanent outdoor floodlighting installation.

Conformity

- UL514B, NEMA FB-1, Federal Standard H-28 (threads), NFPA70-2009 (ANSI)
- CSA C22.2 No. 18.3

_

Service entrance cable fittings

Underground feeder cable fittings

Oil- and water-resistant neoprene bushing is especially designed for sealing around underground feeder cable. Stainless steel retaining ring provides a bearing surface for the gland nut and eliminates cable twist. Ribbed gland nut is strong and easily tightened with a wrench to make a connection of high strength.

Underground liquidtight feeder cable fittings

Service entrance cable fittings

Watertight fittings for oval cables

A design with two tapers inside the body – a slow one and a fast one – permits the stocking of fewer fittings for varied cable sizes and allows maximum take-up. The tapered neoprene bushings are resistant to oil, sunlight and water. Hex gland and body take the same wrench opening and a stainless steel slip ring prevents cable from twisting as gland ring is being tightened. Threads on the body are tapered for water sealing.
